The Sky Bike project is nearing completion of its construction phase, after which I will begin the test phase. A Third Rendition of Sky Bike

I'm looking forward to seeing just how fast this thing can go!

I am doing what I can, however this is still a ONE man operation so updates may be slow.

Well, I've been going from work to coming home and working on the bike as I can and getting it done. Things are looking good. There is some fine tuning to do, however for the most part things are really coming together quite nicely.

The new landing gear is installed, I also got the kill switches put in for all three engines, so it seems that I only have minor work remaining on the fuel tank before I am able to fire it up and do some ground tests.

Videos are up finally!

<http://www.youtube.com/user/Neogentronyx>

I will be integrating them into the site as soon as I figure out how to do that as well.

Currently installing/constructing the break system/fuel tank/ and flight controls, and testing the three engines.

Testing is underway!

A

The NMX-G2 has been turned into parts for the bike, which is in phase 3.0

Anti-Ballistic testing has been put on hold.

Please feel free to send me an E-mail with any questions.

Check out the current Projects!
